

Coiled Nylon Brake Hoses

Nylon tubes are fast replacing steel tubes due to their low weight, easier manufacturability and cleaner internal diameters. They are recommended for Fuel lines, Air Brake System and Oil Circulations. These tubes have capability to resist various fuels like petrol, diesel, almost all chemicals & corrosion. The material nylon is characterized by a combination of high strength, toughness and abrasion resistance and is ranked as an engineering plastic due its unique mechanical, thermal frictional and chemical properties.

Features:

Working pressure: 150 psi
One Service (Blue) 1/2 inch O.D. nylon tubing assembly
Conforms to SAE J844
12 inch leads on both ends
7 mtrs length
Spanner Sizes : 22 mm & 24 mm
Available colours : Blue, Yellow & Red

Contents	Art No	Qty
